

For the beginning ALLEVYN was designed to respond to the human body.

See how **ALLEVYN Gentle Border Heel** can offer flexibility and fit to multiple body areas, helping patients feel more comfortable whilst healing happens.

Neck

Dressing the tracheostomy wound can be a challenge due to the delicate areas on and around the neck. The dressing conforms perfectly around this area, allowing the patient to carry on with their everyday life.

Breast area

Breast surgery often creates wounds that need covering with a dressing. The dressing remains soft on the skin whilst being conformable to fit a wound on any area around the breast.

Under arm

The axilla is a notoriously difficult place to dress. The flexibility of the dressing conforms to the contours of this area well.

Elbow

Bony prominences such as elbows are prone to developing wounds. The design of the dressing allows the patient's elbow joint to remain flexible whilst being soft on the skin.

Spine

Wounds on the spine can often be very sore. The ALLEVYN Gentle Border Heel dressing offers protection, whilst remaining gentle on fragile skin.

Sacrum

The shape of the sacrum can often mean it is hard to dress. The design of the ALLEVYN Gentle Border Heel dressing means it can be anchored securely in place on this area.

Inside Leg

Fits perfectly around the inside leg, providing protection for wounds in this and surrounding areas.

Knee

Perfect protection following knee surgery. The dressing remains anchored in place whilst allowing full flexibility of the knee joint.

Heel

Designed specifically to fit around the heel, the dressing conforms to this area providing the perfect solution to any kind of heel wound.

Foot

The shape and flexibility of the dressing makes it suitable for a wound on any area of the foot.
